

## 4.2 Desktop

This chapter is dedicated to the desktop versions of the Voipswitch's RCS clients. The clients work with Voipswitch RCS ecosystem and can also be integrated with 3<sup>rd</sup> party platforms.

The RCS clients (dialers) are offered as whitelabel, branded for a service provider.

Their look can be skinned by the provider during the deployment process. We provide detailed instruction on graphical customization.

### Available platforms

The dialers are available on the PC and Mac platforms.
